

Finnley Hayward

FULL-STACK SOFTWARE ENGINEER

London, UK | finnl3y@outlook.com | 07759 655106

linkedin.com/in/finnley-hayward | github.com/KeyErrorFinn | git.finnley.co.uk

PROFESSIONAL PROFILE

Full-stack software engineer and Data & AI Engineer at UBS. Builds AI-assisted applications and developer tools with Python, FastAPI, React, TypeScript, Azure OpenAI and GitLab CI. Contributed to 16 internal projects and created automation and templates supporting more than 100 developers. Regularly resolves deployment, authentication and CI issues across three engineering teams.

TECHNICAL SKILLS

Languages and frameworks: Python, TypeScript, JavaScript, React, Vite, HTML and CSS

Backend and platform: FastAPI, SQL, REST APIs, authentication, CORS, credentials and permissions

Cloud and AI: Microsoft Azure, Azure OpenAI and prompt engineering

Testing and delivery: Git, GitLab CI/CD, DevPods, pytest, Vitest, Ruff, automated testing, test reporting and quality gates

Additional project technologies: Electron, Tauri 2, Rust, SQLite, AWS Lambda, DynamoDB, API Gateway, CloudWatch, C#, .NET Framework, BepInEx, Tailwind CSS and Sass

PROFESSIONAL EXPERIENCE

UBS | Data & AI Engineer

September 2025 to Present | London

- Reduced an application's build time from approximately 30 minutes to 3 minutes, a 90 percent improvement.
- Increased automated test coverage from approximately 20 percent to 65 percent, an improvement of 45 percentage points.
- Created a guided CLI that generates projects with CI, tests, authentication, CORS, configuration, quality checks and test reporting, reducing setup from several days to minutes.
- Contribute to 16 internal engineering projects, including eight full applications, five automation tools and three reusable project templates.
- Create developer tools and reusable templates used by more than 100 developers.
- Build AI-assisted applications with Python, FastAPI, React, TypeScript, JavaScript, Azure OpenAI and prompt engineering.
- Support seven Azure-hosted applications and services, resolving deployment, authentication, permissions and GitLab CI issues daily while collaborating with developers, testers and support teams.
- Introduced automated pre-checks that reduce pipeline failures and identify code-quality issues before deployment.

DataAnnotation | AI Training and Software Development Contractor

March 2024 to May 2025 | Remote

- Evaluated AI-generated responses and provided structured feedback on output quality and problem-solving.
- Completed coding, response-evaluation and technical reasoning assignments independently.

EARLIER EXPERIENCE

The Ringley Group | Software Development Technician Intern

September 2023 to November 2023 | London

- Supported a Ruby on Rails platform through data management, website updates and frontend changes.
- Worked with designers to improve usability and implement feedback-led updates.

Contract IT | Part-Time IT Support and Automation Assistant

September 2019 to August 2023 | London

- Provided customer IT support for hardware, software, installations, security and troubleshooting.
- Created automation tools and configured systems around customer requirements.

SELECTED TECHNICAL PROJECTS

RPUK Park Ranger Bills Helper [View project](#)

React, TypeScript, Vite, Sass

Built a browser tool that transforms equipment logs into weekly bills, spreadsheet-ready rows and personalised messages. It groups changes per person and processes contact data locally.

Online Elgato Stream Deck Editor [View project](#)

React, TypeScript, Vite, Tailwind CSS

Built a browser editor that decodes Stream Deck archives, reconstructs nested pages, folders, button states and plugin actions, then exports modified profiles. Local persistence and browser-side processing support static deployment without uploading profiles to a backend.

RepQuest

React, TypeScript, Tauri 2, Rust, SQLite, Android

Developing an offline-first workout application with routines, records, quests, achievements and role-playing progression. A repository abstraction separates React from persistence, while Rust and SQLite transactions commit workouts and rewards atomically and prevent duplicate awards.

WoL Plus

Python, React, TypeScript, Rust, Tauri, AWS

Developing an Alexa Smart Home skill and Windows companion for securely controlling computers. It uses authenticated WebSockets, one-time tickets, transactional DynamoDB operations, command recovery, rate limits and CloudWatch monitoring, with 35 Python tests and 5 Rust tests.

RPUK Screenshot Cropper [View project](#)

Electron, React, JavaScript, Sharp

Created a desktop batch-processing application using a context-isolated preload bridge, Sharp, cached metadata and WebP thumbnails. Performance work reduced tested backend operations to milliseconds across a 2.2 GB image library; the project has 89 passing tests.

How to QuickSell [View project](#)

C#, .NET Framework, BepInEx

Built and packaged a game mod that integrates with an existing economy, applies defensive eligibility rules and prevents duplicate sales from asynchronous item destruction.

EDUCATION AND TRAINING

Mthree | Frontend Development and AI | Completed August 2025

London Vesta College | Level 2 ICT Systems & Principles, Computer Software Engineering | 2023

Chace Community School | BTEC Level 3 Information Technology, Distinction Star | 2021 to 2023

Selected GCSEs: Mathematics Grade 7, Computer Science Grade 6, English Language Grade 4

CERTIFICATIONS AND PROFESSIONAL DEVELOPMENT

Microsoft Certified: Azure AI Fundamentals, AI-900 | February 2026

Microsoft Learn: Introduction to GitHub Copilot | October 2025

DeepLearning.AI: Generative AI for Everyone | June 2026
